

COMPRESSED AIR-REFRIGERANT DRYER

FOR OPERATING PRESSURE UP TO 16 BAR

BT-series compressed air-refrigerant dryers present a reliable, cost-effective and, above all, simple solution. This range unites exceptional benefits into a successful concept. The focal

points of development were concentrated on optimum security, the lowest possible operating expenses, compact design and environmental compatibility.

- + Air/Air and Refrigerant/Air heat exchanger
- + Lowest differential pressure
- + Standard with electronic level-controlled steam trap
- + Includes potential-free contact
- + Environmentally friendly refrigerant R513A with low GWP, which is non-toxic and non-flammable.

Maximum heat transfer by means of air-air heat exchanger. This has a direct impact on reduction of energy consumption.

Vertically arranged stainless steel demister for secure separation. Wet compressed air is directed to the automatic steam trap.

The exchange of heat in the countercurrent and generous dimensions permit complete evaporation of the refrigerant.

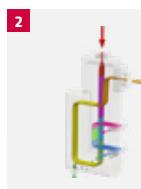

The generously sized cross sections of the flow channels in the heat exchanger result in low flow rates and low energy demands.

A high-volume settling chamber prevents the carrying away of condensation.

Illustration shows: Compressed-air refrigeration dryer BTF57

DETAILS

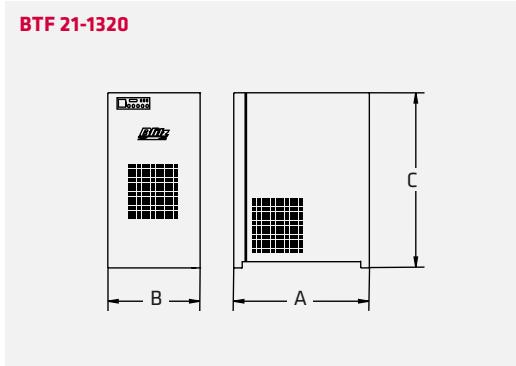

1 Standard with electronic level-controlled steam trap.

2 Air/Air and Refrigerant/Air heat exchanger including demister integrated in single casing to save space.

3 Potential-free contact integrated in the controls as standard.
